crucial and essential information related to global Drug Screening market to help readers, investors, clients to gain a thorough understanding of the market and invest accordingly. Various advanced statistical tools such as SWOT analysis or Porter's Five Forces are used in the report.

The global drug screening market is estimated to reach value of USD 13.56 Billion by 2027, according to a current analysis by Emergen Research. Growth in the consumption of alcohol and illegal substances and stringent regulations in developing as well as developed regions are among the major driving factors for the drug screening market.

Rise in the number of accidents caused by high consumption of alcohol is creating the demand for drug screening. Drug screening is a method used for detection of drugs in urine, blood, or other samples. It is commonly carried out in workplaces as pre-employment testing for individuals and athletes.

Advancements in technology of drug screening and surge in the application of drug screening devices among various end-users are fueling the market. The governments have increased funding for the development of drug testing programs, which is likely to augment the market in the near future. However, ban on the consumption of drugs and alcohol in developing countries is restraining the drug screening market in these countries.
