Vaccine Market

A vaccine refers to a biological preparation that stimulates the production of antibodies and provides immunity against several pathogens. It is generally manufactured using chemical drugs and disease-causing microorganisms in their weakened form that act as antigens. It is thoroughly tested before getting clinically approved to ensure its safety and effectiveness. Vaccines are widely used for preventing life-threatening diseases, such as polio, tetanus, hepatitis, influenza and measles.

We are regularly tracking the direct effect of COVID-19 on the market, along with the indirect influence of associated industries. These observations will be integrated into the report.

Global Vaccine Market Trends and Drivers:

The global vaccine market is primarily driven by the widespread prevalence of infectious

diseases and growing awareness regarding effective immunization against these diseases. Additionally, several vaccination programs and facilities introduced by regional governments and global organizations like WHO and UNICEF across the endemic regions have augmented the product demand. Furthermore, the sudden outbreak of the coronavirus disease (COVID-19) pandemic and increasing government funding and support for developing an effective novel vaccine against the virus has bolstered the market growth. Other factors, including the rising investments by pharmaceutical companies and extensive research and development (R&D) activities to invent improved and updated vaccines for various fatal medical ailments, are also anticipated to provide a positive market outlook.
