Antifungal drugs are generally used to treat and prevent mycosis, including ringworm, athlete's foot, cryptococcal meningitis and candidiasis. Fungal infections are commonly caused by various types of yeasts, such as dermatophytes, trichophyton and candida, that cause irritation, rashes, loss of color, deformed toenail, and vaginal discharge in patients. Some of the commonly prescribed antifungal drugs include fluconazole, econazole, econazole and terbinafine.

The global market is primarily driven by significant growth in the [pharmaceutical](#) sector. Along with this, the increasing investments by public and private firms to upgrade the existing healthcare infrastructure across the globe are creating a positive outlook for the market. Moreover, continual product innovations, such as the introduction of synthetic azole-based compounds to treat invasive superficial and fungal infections, are providing an impetus to the market growth. Some of the other factors contributing to the market growth include extensive

research and development (R&D) activities conducted by key players to launch antifungal drugs variants in the form of sprays, injections and creams.
