Autocatalyst Market

An autocatalyst refers to a cylinder or elliptical cross-section produced by converting metals or ceramics into a fine honeycomb coated with a solution of various chemicals, such as palladium, platinum, rhodium, etc. It consists of ultra-thin and high cell substrates that operate at low temperatures to remove toxic substances from vehicle ignition. An autocatalyst is installed in the exhaust system of vehicles to aid in transforming toxic substances, including hydrocarbon, nitrogen oxide, and carbon monoxide, into harmless nitrogen, water, and carbon dioxide. At present times, three-way catalysts are gaining traction due to advanced systems used for emission treatment of gasoline vehicles.
