

HL7 International and SNOMED International continue long-standing partnership with renewed collaboration agreement

HL7 International and SNOMED International announce that they have signed a five-year renewal of their long-standing and productive collaborative relationship.

LONDON, UNITED KINGDOM, October 21, 2021 /EINPresswire.com/ -- [HL7 International](#) and [SNOMED International](#) today announced that they have signed a five-year renewal of their long-standing and productive collaborative relationship.

Sharing a common goal of developing and provisioning standards for the exchange of interoperable clinical and related health information, HL7 International and SNOMED International have agreed to target their collaboration to further support the implementation of SNOMED CT in HL7 artefacts, consistent with our mutual commitment to advance global health data interoperability).

“

The joint commitment and work produced by our two organizations offers tangible interoperability tools that meet the breadth of content and messaging needs that we are observing globally”

Dr. Charles Jaffe

Per the recently signed agreement, both organizations have extended their commitments to develop projects satisfying the use of SNOMED CT with HL7 Fast Healthcare Interoperability Resources, or FHIR®, and other HL7 products. In particular, the two organizations will continue to work together to maintain the HL7 IPS Free Set in line with new requirements and changes to SNOMED CT. As the need for collaboration among global health standards is highlighted, most recently illustrated in the [G7 digital health communique](#), there is more of a need than ever before to continue our efforts and offer solutions to global

stakeholders.

HL7 CEO Dr. Charles Jaffe, MD, PhD, underscored the significance of this agreement. "The Covid-19 pandemic has greatly heightened the demand for more seamless health data exchange. Our collaboration with SNOMED International is critical to fostering data interoperability. Our long-standing collaboration with SNOMED and the resulting incorporation of SNOMED CT vocabulary within HL7 standards, including FHIR, will advance us to a world in which everyone can access the right data where and when they need it."

SNOMED International CEO Don Sweete reflects on the long-standing relationship that both organizations have contributed to and nurtured over the past seven years. "The joint commitment and work produced by our two organizations offers tangible interoperability tools that meet the breadth of content and messaging needs that we are observing globally" he said. "Collaboration agreements of this nature are an important step in answering the call to action being expressed recently by G7 leaders to address pressing interoperability issues."

Under the agreement, target activities have been planned up to July 2023, at which point a review of delivered work products and upcoming activities will be undertaken. The focus of this first stage of work includes licensing arrangements, change requests and terminology binding for the use of SNOMED CT in HL7 products, maintenance and updates to the HL7 IPS Free Set, and promoting the use of SNOMED CT and FHIR in international use cases. Additional activities will support technical collaborative efforts at HL7 FHIR Connectathon events and prospective educational opportunities put forward by either organization. Extending across the length of the agreement is a joint openness to actively identify further joint working opportunities.

Please visit HL7 International and SNOMED International for more information on this evolving collaboration.

About SNOMED International

SNOMED International is a not-for-profit organization that owns and develops SNOMED CT, the world's most comprehensive healthcare terminology product. We play an essential role in improving the health of humankind by determining standards for a codified language that represents groups of clinical terms. This enables healthcare information to be exchanged globally for the benefit of patients and other stakeholders. We are committed to the rigorous evolution of our products and services, to deliver continuous innovation for the global healthcare community. SNOMED International is the trading name of the International Health Terminology Standards Development Organisation (IHTSDO).

About HL7 International

Health Level Seven® International (HL7) is an ANSI-accredited, not-for-profit standards developing organization with the mission of empowering global health interoperability. With affiliates in over 30 countries, HL7's global membership envisions a world in which everyone can securely access and use the right data when and where they need it. Widely implemented by

vendor and health care systems, and required by governing bodies around the world, HL7 standards deliver solutions for health information technology, including HL7® Fast Healthcare Interoperability Resources (FHIR®), Version 2 (V2) and Clinical Document Architecture (CDA®).
