At present, the increasing prevalence of relapsing-remitting and secondary progressive MS across the globe represents one of the primary factors driving the market. Besides this, governing agencies of numerous countries are launching campaigns to generate awareness about the available treatments. This, along with the technological advancements, such as the introduction of innovative immunomodulators, monoclonal bodies, interferons, and immunosuppressants for the effective treatment of MS, is creating a favorable market outlook. Other factors, including considerable improvements in the healthcare infrastructure, along with extensive research and development (R&D) activities, are anticipated to stimulate the growth of the market. Looking forward, IMARC Group expects the global multiple sclerosis therapies market to grow at a CAGR of around 5% during the forecast period (2021-2026).
