The growth of the global metabolomics market is driven by rise in prevalence of chronic diseases worldwide, an upsurge in R&D investment for the development of metabolomics, and an increase in demand for personalized medicine. However, the lack of skilled professionals in the field along with the astronomical price of metabolomic instruments hampers market growth. Nonetheless, the immense potential of metabolomics in disease diagnostics and its growing prospect in human nutrition would create lucrative opportunities for emerging market players in the near future.

Metabolomics is an innovative approach for the treatment and diagnosis of chronic diseases. Increased adoption of metabolomics in drug development and personalized healthcare is expected to fuel the market growth during the forecast period.

The global metabolomics market is expected to grow at a lucrative rate during the forecast period due to increased adoption of metabolomics in precision medicine and surge in R&D investments. Moreover, technological advancements in auxiliary medical devices used for metabolomics analysis and growth in demand for the development of quality medications are expected to fuel the metabolomics market. However, high cost of medical devices and lack of effective data management for metabolomic profiling hamper the market growth.
