

Global Prostate Cancer Drugs Market Trends, Strategies, And Opportunities 2021-2030

The Business Research Company's Prostate Cancer Drugs Global Market Report 2021: COVID-19 Impact And Recovery

LONDON, GREATER LONDON, UK, October 27, 2021 /EINPresswire.com/ --According to the new market research report 'Prostate Cancer Drugs Global Market Report 2021: COVID-19 Impact

COVID-19 Impact And Recovery

And Recovery' published by The Business Research Company, the prostate cancer drugs market is expected to grow from \$3.65 billion in 2020 to \$3.87 billion in 2021 at a compound annual growth rate (CAGR) of 6%. The growth is mainly due to the companies rearranging their operations and recovering from the COVID-19 impact, which had earlier led to restrictive containment measures involving social distancing, remote working, and the closure of commercial activities that resulted in operational challenges. The market is expected to reach \$5.31 billion in 2025 at a CAGR of 8.2%. The increasing male geriatric population is a major driver for the prostate cancer drugs market.

The prostate cancer drugs market consists of sales of various drugs used for the prevention and treatment of prostate cancer. Prostate cancer is one of the most common types of cancer caused due to uncontrollable development of cells in the prostate gland in men that produces the seminal fluid that nourishes and transports sperm. Some of the possible treatments for prostate cancer include hormonal therapy, chemotherapy, immunotherapy and targeted therapy.

Trends In The Global Prostate Cancer Drugs Market

The use of combination therapy to treat prostate cancer is an emerging trend in the market. This is mainly because in some cases of prostate cancer, monotherapy has not been effective for the patients. In this regard, companies in the prostate cancer drugs market are investing more in combination therapy for the treatment of prostate cancer. For example, in February 2018, Pfizer

announced the results of its Phase 3 PROSPER trial in patients with non-metastatic (M0) Castration-Resistant Prostate Cancer (CRPC), which show that the use of XTANDI[®] (enzalutamide) in combination with androgen deprivation therapy (ADT) significantly reduced the risk of developing metastases or death by 71% compared to using ADT alone. Similarly, other combination therapies such as a combination of radiation therapy and androgen deprivation therapy for men with recurrent prostate cancer, and using chemotherapy drug docetaxel (Taxotere) along with ADT are also being used to treat prostate cancer.

Global Prostate Cancer Drugs Market Segments:

The global prostate cancer drugs market is further segmented:

By Type: Hormone Sensitive Prostate Cancer, Hormone Refractory Prostate Cancer

By Therapy: Hormonal Therapy, Chemotherapy, Immunotherapy, Targeted Therapy

By End User: Hospitals, Clinics, Others
