As the novel coronavirus (COVID-19) crisis takes over the world, we are continuously tracking the changes in the markets, as well as the purchase behaviours of the consumers globally and our estimates about the latest market trends and forecasts are being done after considering the impact of this pandemic.

Market Trends:

The rising number of individuals undergoing surgical interventions due to the escalating prevalence of chronic diseases is driving the medical nonwoven disposables market worldwide. Apart from this, the growing awareness towards the benefits of medical nonwoven disposables, including sterility, breathability, comfort, antibacterial properties, etc., is also propelling the market growth. Moreover, the increasing concerns among parents towards the negative impact of using regular diapers on babies are augmenting the adoption of medical nonwoven disposables to make skin-friendly diapers. Additionally, the elevating environmental concerns are encouraging various leading manufacturers to introduce biodegradable product variants, which are made using biopolymer, including polylactic acid (PLA). This, in turn, is further expected to fuel the medical nonwoven disposables market over the forecasted period.
