Psoriasis Therapeutics

Psoriasis is considered to be a persistent skin disorder that is characterized mainly by skin irritation and scaly rashes where the skin cells multiply up to 10 times faster than normal. Psoriasis majorly affects the knees, elbows, and scalp. The major objective of the therapy for this disease is to stop the skin cells from growing so quickly. The therapeutic approach for psoriasis depends upon the severity and amount of skin affected by the same.

Covid-19 Scenario:

- 1) The Covid-19 pandemic and followed by lockdown has affected several manufacturing industries.
- 2) The prolonged lockdown resulted in a disrupted supply chain and increased the prices of raw materials.
- 3) However, as the world has been recovering from the pandemic, the market is estimated to get back on track.

However, health risks posed due to the medication along with high costs of therapies restrain the growth of the psoriasis therapeutics market. Albeit, increasing development of new biologics and novel pipeline drugs will offer profitable opportunities for psoriasis therapeutics.

The report segments the market on the basis of drug class, molecule type, route of administration, and region.

Based on drug class, the market is divided into TNF inhibitors, PDE4 inhibitors, interleukin blockers, and others. Based on molecule type, the market is classified into biologics and small molecules. Based on route of administration the market is divided into oral, parenteral, and topical. Based on region, it has been analyzed across North America, Europe, Asia-Pacific, and LAMEA.
