Endocarditis is an infection that transpires at the inner lining of the heart valves and heart chambers. If not treated at an early stage, it could damage the entire heart and heart valves and lead to life-threatening complications. People with artificial heart valves weakened or damaged heart valves, and other heart diseases are more sensitive to endocarditis. A changed heart murmur, fatigue, fever and chills, night sweating, aching joints and muscles, and pain in the chest during breathing are the common symptoms of endocarditis. Endocarditis occurs due to the spread of infection from other parts of the body. Therefore, the treatment is intended at the underlying causes of endocarditis such as the use of antibiotics.

Comprehensive competitive analysis and profiles of major market players, such as

Pfizer, Inc.  
Novartis AG

Elli Lilly and Company  
Merck & Co., Inc.  
Allergan  
F. Hoffmann-La Roche Ltd.  
Teva Pharmaceutical Industries Limited  
Mylan N.V.
