A Gait trainer is a wheeled device that assists individuals in walking and balancing properly. This device is mainly used by people either having inappropriate functioning of gait skills owing to various disorders or by individuals that are learning to walk pertaining to inability to walk independently. The device is used by both adults as well as pediatrics with physical maladies. Gait trainers offer several features including postural alignment, unweighting support and balance assistance to the individuals suffering from independent walking inability. Stroke, osteoporosis, cerebral palsy are among the leading causes of long-term disability. Impairments caused due to a stroke lead to difficulties in walking.
