

Increasing Cyberattacks Contribute To The Growth Of The Antivirus Software Market To \$4.5B By 2025

*The Business Research Company's
Antivirus Software Global Market Report
2021 - COVID-19 Growth And Change*

LONDON, GREATER LONDON , UK,
November 9, 2021 /EINPresswire.com/

-- The increasing number of cyber-attacks is expected to propel the growth of the [antivirus software market](#) in the coming years. A

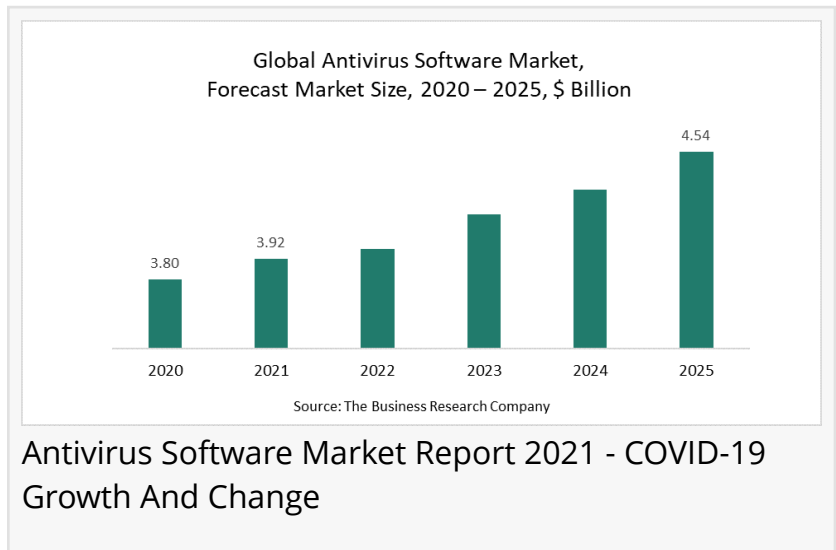

cyberattack is a cyberspace-based attack aimed at disrupting, disabling, destroying, or manipulating a

computer or other device intentionally. There is an increase in hacking and data breaches in computers, laptops, and mobiles using viruses or malware. Antivirus software can block or prevent the virus or malware from entering the device and prevents cyberattacks. For instance, in 2020, Air India, an Indian-based carrier airline company, reported hackers had compromised their servers and accessed the personal data of 4.5 million fliers. In India, in 2020 alone 1.16 million cyber security cases are registered. Therefore, the increasing number of cyber-attacks drives the market for antivirus software.

The global antivirus software market size is expected to grow from \$3.80 billion in 2020 to \$3.92 billion in 2021 at a compound annual growth rate (CAGR) of 3.2%. The growth of the antivirus software market is mainly due to the companies resuming their operations and adapting to the new normal while recovering from the COVID-19 impact, which had earlier led to restrictive containment measures involving social distancing, remote working, and the closure of commercial activities that resulted in operational challenges. The antivirus software market is expected to reach \$4.54 billion in 2025 at a CAGR of 3.8%.
