

Fructose Industry Grows With Consumer Preference For Lite Food Items

*The Business Research Company's
Fructose Global Market Report 2021 -
COVID-19 Growth And Change*

LONDON, GREATER LONDON, UK,
November 11, 2021 /

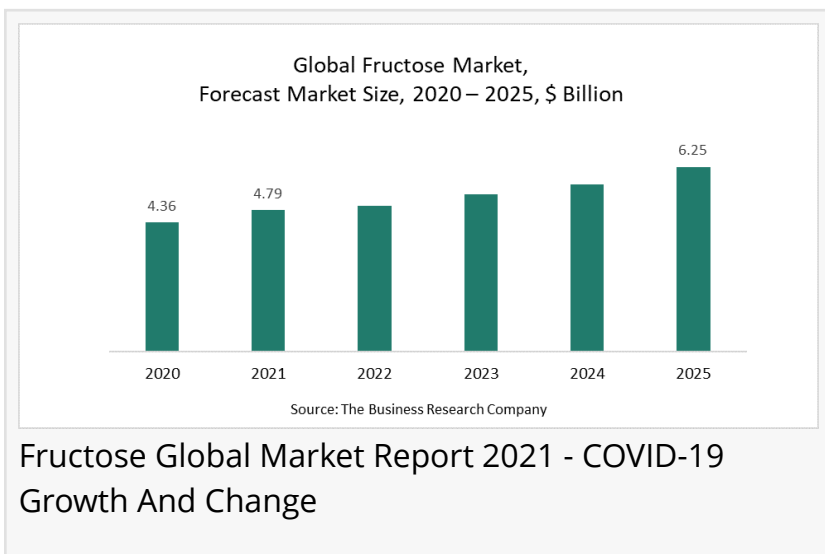

EINPresswire.com/ -- The increasing demand for low-sugar and low-calorie food items is contributing to the growth of the fructose market. More individuals are opting for low-sugar, low-calorie foods since they are an excellent way to lose weight while also

providing a rich source of vitamins and minerals that are beneficial to one's overall health. As fructose is sweeter than sugar, it can be used to sweeten foods and beverages in smaller amounts. When employed in proper product formulations, this aids in the reduction of calories in foods and beverages, as well as the reduction of future excitation from eating. For instance, according to a survey conducted in 2020 by Archer Daniels Midland (ADM), a US-based food processing company, 67% of customers are concerned about sugars and sweeteners, with 39% indicating that lower sugar is essential to them when it comes to convenience foods, drinks, and snacks. Therefore, the increasing demand for low sugars and low calories is expected to drive the growth of the fructose market in the coming years.

The global fructose market size is expected to grow from \$4.36 billion in 2020 to \$4.79 billion in 2021 at a compound annual growth rate (CAGR) of 9.9%. The growth of the fructose market is mainly due to the companies resuming their operations and adapting to the new normal while recovering from the COVID-19 impact, which had earlier led to restrictive containment measures involving social distancing, remote working, and the closure of commercial activities that resulted in operational challenges. The fructose market is expected to reach \$6.25 billion in 2025 at a CAGR of 6.9%.
