Biosurgery is a medical procedure that uses [natural](#), synthetic, or semi-synthetic materials to seal surgical incisions and wounds. It is extensively utilized to prevent excessive blood loss,

provide adhesion for wound or tissue sealing, repair damaged bones and tissues, etc.

Biosurgeries are generally conducted through hemostatic, sealant, bone graft substitute, adhesion prevention, soft tissue repair, and staple line reinforcement products. They also use natural allografts, xenografts, and cultured epithelial autografts to minimize intra- and post-operative complications and promote faster recovery of patients. Consequently, biosurgical processes are widely adopted in several surgeries, including neurological, orthopedic, spinal, reconstruction, thoracic, cardiovascular, etc.

As the novel coronavirus (COVID-19) crisis takes over the world, we are continuously tracking the changes in the markets, as well as the industry behaviours of the consumers globally and our estimates about the latest market trends and forecasts are being done after considering the impact of this pandemic.

Biosurgery Market Trends:

The escalating incidences of musculoskeletal disorders are primarily driving the biosurgery market. Moreover, the expanding geriatric population, who are more prone to chronic medical ailments, such as osteoporosis, is further catalyzing the market growth. Besides this, numerous [healthcare](#) providers are increasingly adopting biosurgeries for effectively managing blood loss
