The global NK cells therapeutics market is primarily driven by their increasing utilization in various molecular and combination therapies for various treatments. They are used as effective therapeutic [drugs](#) in cases of cancer, liver and infectious diseases. Furthermore, the rising awareness regarding the importance of immunotherapies has increased the need for better therapeutic options and the launch of new products, which is expected to influence market growth in the future. As a result, several research activities have resulted in the development of allogeneic NK cells with maximum therapeutic effects. They also enhance the target and extend the persistence of potent immune cells, which helps create a strong and sustained anti-cancer immune-mediated attack.
