Polycythemia vera (PV) is a syndrome characterized by an increase in the number of red blood cells in the bloodstream acquired from various sources. Visible symptoms include itching, headache, dizziness, fatigue, blind spots, leukemia, and even heart attack in a few cases due to an unusual thrombotic event. As per reports, the disease is known to occur in men more often above the age of 60. Comorbidities of polycythemia vera include peptic ulcers, blood clots, gout, acute myeloid leukemia,

myelodysplastic syndrome, and splenomegaly. In the absence of a proper therapy, survival rates in patients suffering from the disease comes down to as low as 3 years with the number stretching to 14 years for patients with a healthy metabolism.
