Nephrology and Urology Devices

2021-2028". The report provides a detailed analysis of changing market dynamics, top segments, value chain, key investment pockets, regional scenario, and competitive landscape.

Nephrology and urology devices are medical devices that are used for the treatment of urinary system and kidney diseases such as chronic kidney diseases (CKD), urinary incontinence and pelvic organ prolapse, kidney stone, benign prostatic hyperplasia (BPH), and end-stage renal disease (ESRD). According to WHO, more than 190 million patients suffer from chronic renal failure and undergo renal dialysis and over 220 million males suffer from diseases associated with prostate glands such as swelling that results in blockage of the flow of urine through the body. These rising incidences of kidney and urology diseases have shifted the inclination of physicians towards the use of highly advanced nephrology and urology devices that significantly reduce treatment and recovery time.
