# Liongard Expands Partnership with N-able

Liongard's N-able ecosystem continues to grow—delivering even more visibility into endpoints

HOUSTON, TX, USA, November 16, 2021 /EINPresswire.com/ -- Houston-based Liongard®, an automation platform for managed services providers (MSPs), announced today the launch of its [N-able](#)™ RMM Inspector. This Inspector expands Liongard's relationship with N-able, joining N-able N-central® and N-able Backup Inspectors to provide Liongard partners deep visibility into the N-able ecosystem.

Liongard's N-able RMM Inspector pulls endpoint data into the Liongard platform, enabling MSPs to access information, such as accounts, sites, users, endpoint configuration, RMM alerts, and patches across all customers in one view. MSPs can additionally resolve issues with automatic alerts for low disk space, unresolved issues, and endpoint patching statuses—all without end users being impacted. They can even go back in time to see what changes were made, simplifying discovery and decreasing time to resolution.

> "
>
> Liongard is supremely focused on helping MSPs operate more efficiently. We look forward to ongoing collaborations with the Liongard team and continuing to empower MSPs."
>
> *Tyler McDonald, director of business development, N-able*

This Inspector expands Liongard's unified visibility and enables even more insights by integrating data from the robust RMM platform that is a core component for many MSPs. "Our goal at Liongard is always to meet our partners where they are and create solutions that work with the tech stack they already have. That's why we're so excited about our N-able RMM Inspector—we're now able to extend unified visibility to one of the tools our partners are using every day," said Matt Miller, VP of Product for

Liongard. "Liongard's N-able RMM Inspector integrates endpoint data into Liongard, furthering our promise to deliver unified visibility to MSPs."

"Liongard is supremely focused on helping MSPs operate more efficiently. We're excited to support this vision through TAP and are very happy that Liongard has built multiple inspectors for N-able products, furthering the options our mutual customers have for integration. We look forward to continue collaborating with the Liongard team to empower MSPs," said Tyler McDonald, director of business development, N-able.

Liongard's existing N-able N-central Inspector enables its MSPs to easily access data on endpoint configurations, accounts, and users—all in one location. Issues are quickly resolved with automatic alerts for low disk space, patching status, and more, allowing MSPs to proactively manage fixes before they affect users. Liongard's historical data allows techs to go back in time to see what changes were made, and when—removing guesswork and hours of searching.

The existing N-able Backup Inspector allows Liongard MSPs to access data such as protected devices, systems, and users across all customers in one view, eliminating the need to switch between apps or programs. Techs can easily confirm backups are working at a glance, without having to check each system manually; and automatic alerts for backup failures or settings changes mitigate risk and keep MSPs ahead of any critical issues.

Liongard's setup guides are available for each Inspector: N-able RMM, N-able N-Central, and N-able Backup.
