

New Study from Strategy Highlights a \$ 6,179.32 Million Global Market for Urinary Incontinence Device by 2030

The overall impact of the COVID-19 pandemic remained negative for key players in the urinary incontinence industry.

NE WIN SIVERS DRIVE, PROVINCE: -
PORTLAND, UNITED STATES, November 17, 2021 /EINPresswire.com/ --

According to the report by Allied Market Research, titled, "[Urinary Incontinence Device Market](#)" by Drug Class (Bisphosphonates, Selective Estrogen Inhibitors Modulator (SERM), Parathyroid Hormone Therapy, Calcitonin, Rank Ligand Inhibitors, and Others) and Route of Administration (Oral, Injectable, and Others): Global Opportunity Analysis and Industry Forecast, 2019–2026". The report provides a detailed analysis of changing market dynamics, top segments, value chain, key investment pockets, regional scenario, and competitive landscape.

Urinary Incontinence Device

“

Urinary Incontinence Device Market by Product (Urinary Catheters, Vaginal Slings, Electrical Stimulation Devices, Artificial Urinary Sphincters, and Other Devices)”

Allied Market Research

Urinary incontinence is a highly prevalent condition and is considered to be an underreported problem that increases with age that affects nearly 50% of the geriatric population. It is categorized into four major types namely stress urinary incontinence, urge urinary incontinence, mixed urinary incontinence, and functional urinary incontinence. Stress urine leakage is associated with increased abdominal pressure from laughing, sneezing, coughing, climbing stairs, or other physical factors that assert stress on the abdominal cavity. Whereas, urge incontinence is the

involuntary leakage accompanied by urgency. Among the four above-mentioned types of urinary incontinence; stress and urge are commonly prevalent among men and women.

Some of the other factors responsible for substantial market growth include rise in demand for minimally invasive procedures, development of innovative urinary incontinence devices, increase in aging population coupled with high risk of urological conditions, and increase in the urinary incontinent patients transitioning from conventional solutions to advanced surgical treatments. Factors such as lack of awareness regarding novel developments in the urinary incontinence devices and post-operative complications associated with the devices restrict the market growth to a certain extent.

Teleflex Incorporated

By incontinence type, the stress incontinence segment generated the highest revenue in 2020 accounting for 11.90% of the total share of the urinary incontinence device market and is anticipated to continue this trend throughout the forecast period. Pregnancy as well as childbirth results in the stretching and weakening of a woman's pelvic floor muscles, which causes stress urinary incontinence. In addition, prostate surgeries in men can also result in stress urinary incontinence. This has made stress urinary incontinence the most prevalent conditions among men and women.

000000-00 0000000000:

- 1) The Covid-19 pandemic and followed by lockdown has affected several manufacturing industries.
- 2) The prolonged lockdown resulted in a disrupted supply chain and increased the prices of raw materials.
- 3) However, as the world has been recovering from the pandemic, the market is estimated to get back on track.
