Dystonia a type of neurological movement disorder that is characterized by irregular uncontrollable muscle contractions followed by involuntary twisting body parts and irregular posture. The patient suffering from dystonia may experience dragging leg, cramps in the foot, involuntary pulling of muscles of neck, difficulties in speech, and uncontrollable blinking. Dystonia is more common in women than in men. Moreover, anticholinergic, benzodiazepine, and dopamine drugs are major groups of drugs used in dystonia treatment. Dystonia is certifiably not a single disease yet a disorder—a bunch of indications that cannot be attributed to a solitary reason yet share normal components. Some kinds of dystonia may influence a selected body area, for example, the neck, face, jaw, eyes, appendages, or vocal cords. The disorder can occur at any age, most often in middle aged people.
