

How Does The Waste Management And Remediation Services Market Get Higher Recycling Rates?

The Business Research Company's Waste Management And Remediation Services Global Market Report 2021 - COVID-19 Impact And Recovery

LONDON, GREATER LONDON, UK,
November 26, 2021 /

EINPresswire.com/ -- Waste management and remediation services are increasingly using sensors for managing waste collected. A sensor is a device that detects and responds to some type of input from the physical environment. The specific input could be light, heat, motion, moisture, pressure, or any other environmental phenomena. Sensors let waste management companies know that bins are full and need to be serviced. Sensor technology can also be used to sort recyclables quickly and efficiently, thereby reducing manual work and encouraging higher recycling rates. This enables companies to have a complete visibility of containers which helps them to reduce the costs. For instance, the OnePlus Metro from OnePlus Systems is an ultrasonic trash can sensor that lets waste management companies determine if waste containers are full.

The [global waste management and remediation services market size](#) is expected to grow from \$504.14 billion in 2020 to \$542.83 billion in 2021 at a compound annual growth rate (CAGR) of 7.7%. The growth is mainly due to the companies rearranging their operations and recovering from the COVID-19 impact, which had earlier led to restrictive containment measures involving social distancing, remote working, and the closure of commercial activities that resulted in operational challenges. The market is expected to reach \$679.85 billion in 2025 at a CAGR of 6%.
