

Announcing Symptomatical - Stay Ahead of the COVID Curve and Ensure a Safe School Environment

Symptomatical - a new health screening method that allows your school to stay open.

NEW YORK, USA, November 29, 2021 /EINPresswire.com/ -- [Symptomatical](#) launches a platform that helps schools to move daily student Covid-19 screenings online.

Parents can quickly and easily submit daily health information about their children and COVID-19 symptoms online before entering school buildings. "A new screening method that allows your school to stay open."

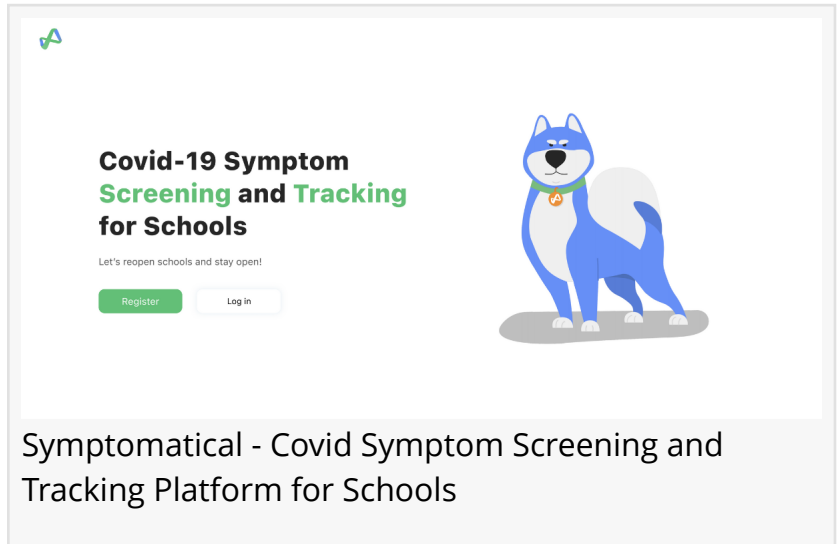

“

Symptomatical makes daily health screenings and temperature assessments easier. Parents need a couple of minutes to respond to the required questions about students' health before reporting to school.”

Iva Kozlovskaya

regulations and CDC documents.

After that, the parents see if their child is allowed to enter the school premises or should stay

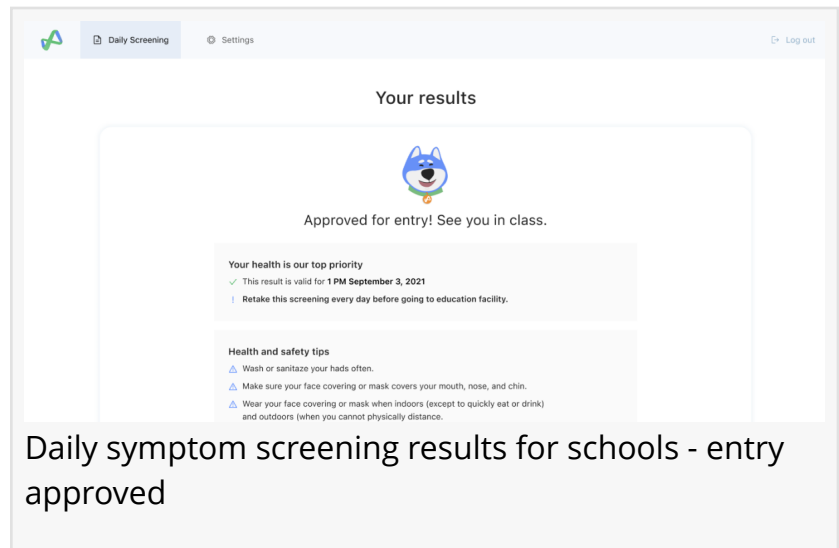

Symptomatical [health tracking app for schools](#) platform offers additional features to ensure safety to students and schools. It enables offline learning by providing screening results tracking, departments and location management, comprehensive reporting, customizable questionnaire, and more. The primary goal of Symptomatical — help to stay ahead of the COVID curve and ensure a safe school environment.

How does the online screening process work?

In the app, parents answer the questions if their child is experiencing symptoms. They are based on the state's

home. The school leaders see information about daily statuses in the dashboard. The app sends automatic reminders before the classes begin. No downloads are needed. Parents can complete a form each morning using a smartphone app or a website. The school administration sees daily results in the dashboard. It can easily create reports for school districts if required.

Daily symptom screening results for schools - entry approved

School principals mention that similar apps have already helped them disclose cases among students.

How Does It Affect Schools?

According to recent research, offline education is more effective compared to online learning. Students understand the materials better when they can directly meet their lecturers. Using daily screening apps, schools can resume offline learning and improve their students' performance.

CEO of Symptomatical Iva Kozlovskaya started platform development when "several schools requested help in moving the health screening process online to keep the health of each student under control. Symptomatical makes daily health screenings and temperature assessments easier. Parents need just a couple of minutes to respond to the required questions about childrens' well-being before reporting to school."
