Drivers, restraints, and opportunities

Technological advancements, rise in prevalence of cancer, and increase in genome mapping programs and number of R&D activities drive the growth of the global epigenetics market. However, standardization concerns regarding epigenetics-based diagnostics and lack of skilled professionals hamper the market growth. On the contrary, untapped potential in developing countries is expected to create lucrative opportunities for the market players in the future.

Covid-19 scenario:

Since the Covid-19 outbreak, researchers have been working to find a vaccine against Covid-19 virus. In addition, the use of targeted antiviral therapies such as rapamycin, remdesivir, ribavirin, and other epigenetic drugs have been demonstrated to inhibit the infection.

Researchers have been trying to understand how epigenetics could prevent viral proliferation, so that vaccines could be developed to specifically target the replicating mechanism of virus.

During the pandemic, the number of epigenetic research activities and awareness regarding epigenetic drugs have been increased.
