Sterilants are often used in healthcare as they help to chemically treat medical supplies and surgical instruments. They ensure that infectious microorganisms are not transmitted to patients. The common sterilants used in healthcare include vaporized hydrogen peroxide, ethylene oxide, and peracetic acid. In addition, sterilants are used in the agriculture and the food industries where they help in water sterilization and increase the shelf life of food, respectively. In healthcare, sterilants not only kill all microorganisms but also help kill bacterial spores from the surface of inanimate objects. This way, sterilants help reduce the chances of different infections.
