The global digital radiography detectors market is expected to witness a rapid growth, owing to rise in incidence of sports-related injuries and cancer. At present, many patients, especially in developing nations are undergoing image testing every year. Apart from that, the number of geriatric population is increasing, which is expected to drive the demand for digital radiography detectors in the years to come. This is attributed to the fact that elderly people are highly prone to suffer from age-

related diseases, thus adding to the need for conducting various radiographic tests. In addition, leading players are focusing more on introducing new technologies especially for C-arms and

fluoroscopy devices among end users, thus contributing toward the growth of the overall market.
