Inhalers are also named as allergy spray or pump. Inhalers are mostly used for treatment and medication delivery for respiratory diseases including chronic obstructive pulmonary disease and asthma. Inhalers play a vital role in the management of patients with obstructive airway disease (OAD). Inhalers minimize medication in throat or mouth and the need for exact synchronization with actuation of the device. The digital inhaler is a device that delivers a specific amount of medication to the lungs, in the form of a short burst of aerosolized medicine that is self-administered by the patient through inhalation. Digital

inhaler has built-in sensors that detect use of inhaler and measure inspiratory flow, according to the release and dose management. There are various types of digital dose inhaler available in the market such as metered dose inhaler (MDI) and dry powder inhaler (DPI). Out of which metered dose inhaler most widely used dose delivery system for treating asthma, chronic obstructive pulmonary disease (COPD) and other respiratory disorders.
