Collagen casings are essential in the production of a variety of value-added or processed meat products. The high mechanical strength and fibrous nature of these products have boosted their

demand in numerous applications, including casings for sausages and meat-based products. Furthermore, sausage production continues to grow across geographies, as sausages are increasingly becoming mainstream food. Different types of sausages available in the market include fresh sausages, dry-cured sausages, cooked sausages, and semi-dry sausages, among others.

There are close to 100 variants of sausages that are manufactured worldwide. Europe is one of the leading consumers of sausages. German, Italian, and Portuguese sausages have gained global recognition. The consumption of sausages is peculiarly high in western countries such as the UK, Italy, the US, Germany, and Poland. Wide popularity and acceptance of frozen foods in the colder countries further provides a robust growth platform for sausages. The sales of collagen casings are proportionate to the rising consumption of sausages. This factor is anticipated to contribute to the growth of the collagen casings market in the coming years.

Impact of COVID-19 Pandemic on Collagen Casing Market

The ongoing COVID-19 pandemic has drastically altered the status of the collagen casings industry. The outbreak has declined operational efficiency and interrupted the value chains due to the sudden closure of national and international boundaries, thereby creating revenue loss and damage. The disruption in the value chain has had a negative impact on collagen casings supply, which has impacted the growth of the collagen casings market. This, in turn, is affecting the development of the end-use industries such as food processing, food service, and food retail. However, as the economies are planning to revive their operations and start vaccine deployment across various countries, the demand for collagen casings is expected to rise globally. A rise in health awareness among the populace due to COVID-19, coupled with the production of collagen casings from safe materials, is expected to boost the growth of the collagen casings market..

Based on type, the global collagen casing market is further segmented into edible and inedible. The edible segment accounted for a larger market share in 2020 and is expected to register a higher CAGR during the forecast period. Edible collagen casings are made by the extraction process, usually from the cattle hide. The edible collagen casings are available in straight and curved forms. The straight ones range generally from 13mm to 45mm, whereas the curved versions of the edible collagen casings range from 20mm to 45mm. Edible collagen casings are ideally suited for hotdogs, smoked and polished sausage, snack sticks, bratwurst, Italian sausage, pepperoni, breakfast links, and many ethnic sausages. The edible collagens are highly consistent and durable while smoking and stuffing processes. The edible casings provide an appetizing appearance to the sausage and usually come in round or cylindrical shapes. The edible collagen casings are best suited for grilled or smoked sausages and do not require any soaking.

The collagen casing market is segmented into five main regions—North America, Europe, Asia

Pacific (APAC), Middle East & Africa (MEA), and South America (SAM). In 2020,

Collagen Casing Market: Competitive Landscape and Key Developments

Devro Plc., Overseas Casing Company, FABIOS Spółka Akcyjna (FABIOS SA), Fibran Group, LEM Products, Nippi Collagen NA Inc., Shenguan Holdings (Group) Limited, and Viscofan, S.A are among the key players in the global Collagen Casing market. The leading companies focus on the expansion and diversification of their market presence, and acquisition of new customer base, thereby tapping prevailing business opportunities.
