Chlorine dioxide (ClO₂) refers to a small and volatile chemical compound consisting of one chlorine atom and two oxygen atoms. It is a yellowish-brown gas with an unpleasant odor and exists as a free radical in dilute solutions. Chlorine dioxide is generally produced from sodium chlorite and sodium chlorate. It is widely used in poultry processing, disinfecting drinking water, washing vegetables and fruits, etc. Chlorine dioxide is also a selective oxidizer and can control microorganisms in water at very low dosages. It finds several applications across numerous industries, such as healthcare, paper processing, oil and gas, food and beverage (F&B), etc.

Market Trends:

The growing demand for industrial water treatment systems across the globe is one of the primary factors driving the chlorine dioxide market. In addition to this, the increasing requirement for ClO₂ to wash various meat products, including chicken and seafood, owing to its antimicrobial properties, is further propelling the market growth. Moreover, the widespread product utilization in the pulp and paper industry is augmenting the global market. Apart from this, the expanding usage of biocide technologies for safety interlocks is acting as another significant growth-inducing factor. Furthermore, the escalating demand for ClO₂ in the F&B industry to reduce spoilage is positively influencing the market growth. Besides this, the rising

product usage to sterilize medical and laboratory equipment is expected to fuel the chlorine dioxide market in the coming years.
