The function of kidneys is to remove waste products and excess fluid from the blood. If the kidneys do not function normally, this process is implemented by hemodialysis. Waste products, such as urea and creatinine, are removed from the blood with the help of artificial and natural semipermeable membranes.

## Growth Drivers and Industry Trends

Surge in funding for improved products & services, rise in number of ESRD patients, and increase in incidence of hypertension and diabetes drive the growth in the global hemodialysis market. However, risks and complications related to dialysis are expected to hinder the growth in the market. On the other hand, technological advancements and increase in opportunities in developing countries create new opportunities in the industry
