

The Fixed-Wing VTOL UAV Market Opportunity Analysis and Industry Forecast, 2021–2030

Due to COVID-19 pandemic government across the all the major countries have announced lockdown leading to various business shutdowns.

PORTLAND, OR, UNITED STATES, December 6, 2021 /EINPresswire.com/ -- Unmanned aerial vehicles (UAV) are aircraft/drones which does not require a pilot in the aircraft to fly it and can be remotely piloted or can be fully autonomic. Virtual take-off and landing (VTOL) aircraft does are able to take-off and land vertically and, then transit into a horizontal flight without compromising endurance or efficiency. Fixed-wing VTOL UAV are similar to helicopter, and it includes a multicopter with at least four propellers. Moreover, it is more beneficial than other traditional aircraft as they are not dependent on any runway infrastructure. The vehicle is primarily built for low take-off weight and great aerodynamic performance. The center of gravity placement in relation to the neutral point is used to determine aerodynamic design stages, wing, and static stability sizes. Furthermore, military is the prominent end-user of fixed-wing VTOL aircraft that enables them to carry their troops to any location as and when required. The manufacturers of unmanned aerial vehicles are also using the hybrid technology for better endurance and speed. In addition, the manufacturers and research organizations are focused on developing electric fixed-wing VTOL aircraft which is more cost-effective and is commercialized for various industries. This will also help in enhancing the endurance for the requirement of longer flights.

Major Market Players: ALTI UAS, UKRSPECSYSTEMS, Threod Systems, Quantum Systems, Vertical Technologies, Arcturus UAV, Textron Inc., Lockheed Martin, Latitude Engineering, and Bluebird Aero Systems LTD

Due to COVID-19 pandemic government across the all the major countries have announced lockdown leading to various business shutdowns. This has led to disruption in manufacturing of defense equipment. Moreover, due to economic slowdown and more focus on health budget many countries have reduced their defense budget thus affecting the fixed-wing VTOL UAV market. Furthermore, due lockdown there was unavailability of raw materials required for manufacturing of the fixed-wing VTOL UAV. In addition, due to social distancing & travelling restriction norms there was unavailability of skilled labor required for developing of software for the fixed-wing VTOL UAV. Defense is an evolving sector which had a slight setback due to the

pandemic, but it is expected to recover post pandemic and drive growth of the fixed-wing VTOL UAV market.

Rise in threat terrorist attacks has increased the use VTOL UAVs for surveillance and tactical missions. Since, these UAVs can independently and safely take off and land vertically within small area they can perform effectively in the most difficult terrain with minimal noise. For instance, in 2018, national security contractor Sierra Nevada Corporation (SNC) and Israel Aerospace Industries Limited (IAI) partnered to co-develop a tactical VTOL UAV system for American tactical UAV market. Furthermore, in February 2020, UMS SKELDAR, a joint venture between defense company Saab AB and UAV manufacturer UMS AERO GROUP. The company launched UMS SKELDAR's new unmanned aerial vehicle (UAV), the Skeldar V-150. It is designed to support tactical operations for surveillance, emergency response, homeland security and defense. The vehicle has two payload bays which offer great flexibility to accommodate multiple combination of sensors and has endurance of more than 4 hours. Thus, rise in use of fixed-wing VTOL UAV in military & defense are expected to drive growth of the fixed-wing VTOL UAV market.

Key Benefits of the Report:

- This study presents the analytical depiction of the fixed-wing VTOL UAV market along with the current trends and future estimations to determine the imminent investment pockets.
- The report presents information related to key drivers, restraints, and opportunities along with challenges of the fixed-wing VTOL UAV market.
- The current market is quantitatively analyzed from 2020 to 2030 to highlight the fixed-wing VTOL UAV market growth scenario.
- The report provides detailed the fixed-wing VTOL UAV market analysis based on competitive intensity and how the competition will take shape in coming years.

About Allied Market Research

Allied Market Research (AMR) is a full-service market research and business-consulting wing of Allied Analytics LLP, based in Portland, Oregon. AMR provides global enterprises as well as medium and small businesses with unmatched quality of "Market Research Reports" and "Business Intelligence Solutions." AMR has a targeted view to provide business insights and consulting to assist its clients to make strategic business decisions and achieve sustainable growth in their respective market domain.

AMR introduces its online premium subscription-based library Avenue, designed specifically to offer cost-effective, one-stop solution for enterprises, investors, and universities. With Avenue, subscribers can avail an entire repository of reports on more than 2,000 niche industries and more than 12,000 company profiles. Moreover, users can get an online access to quantitative and qualitative data in PDF and Excel formats along with analyst support, customization, and updated versions of reports.
