

# Pentagon 2000 Software, Inc. Announces Major New System Version

*Enhancements to Pentagon 2000SQL™ incorporate new features and a platform for future innovation*

NEW YORK, NY, USA, December 6, 2021 /EINPresswire.com/ -- Pentagon 2000 Software, Inc., is pleased to announce a major new version of its flagship software system. Version 2021.01 is being released with a set of new functionality, performance, and reliability features.

Each year, Pentagon 2000 Software develops and deploys new releases of the software system that include product updates and enhancements. On a less frequent basis, major new versions are introduced that provide both functional enhancements as well

as underlying system platform enhancements. New versions of the system are available as no-charge upgrades to existing customers through their support agreement.

This latest version includes many new features and functions, and also provides new system-level changes and an upgraded graphical user interface. This version also provides an important foundation for future enhancements that will soon deliver a browser-based web client interface and advanced CMMC cybersecurity functionality.

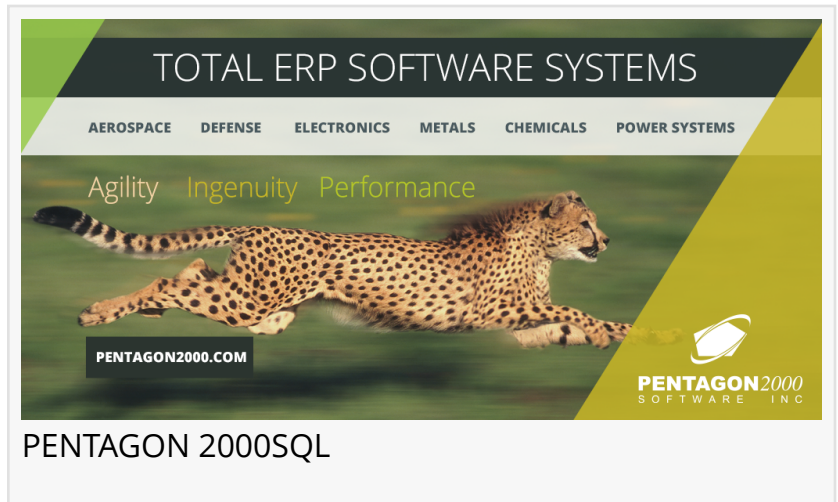

Delivery of this new version and the related support services are yet another indication of the investments that Pentagon 2000 Software is making to add value and support for customer business operations.
