

Life Science Search Partners Publishes Insights On How Military Leadership Principles Can Be Used In A Remote Workforce

New report showcases best practices on transitioning military leadership principles into the remote corporate setting successfully.

TROY, MI , 48084, December 7, 2021 /EINPresswire.com/ -- Highlighting expertise leading management professionals, this new report that features insights from leadership throughout the US. Learning from the best in operational excellence, [Life Science Search Partners](#) uncovers five focus points to drive effective operations management in remote environments, including communication and collaboration, culture building, digital transformation, reporting and tracking, and change management.

According to publicly available research, there is an expectation that by 2025, 36.2 million Americans will be working remotely, an 87% percent increase from pre-pandemic levels.

When successfully implemented, the new age of remote operations yields increased job satisfaction, retention, productivity, and cost optimization. Continuously combatting effective implementation are disconnections with personnel, processes, and technology, introducing abundant challenges to global, cross-functional collaboration across stakeholders and industries.

"It's so important to establish good habits around listening, especially as leaders," says Dion Anglin, an operational excellence expert and director at one of the world's largest designers, manufacturers, and distributors of engines and power generation products. "Listening helps teams find middle ground and an understanding around what needs to get accomplished. Only when great communication structures are in place can great leaders give people the opportunity to lead in their own capacities, too."
