Liquid nutritional supplements are dietary supplements that are available in liquefied form. They are generally used to improve body metabolism to decrease incidents of lifestyle disorders. They are principally used by consumers that are incapable of consuming dietary supplements in capsule, thick gel, and solid tablet forms. The growth of the global liquid nutritional supplement market is attributed to the growing consumption of liquid nutritional supplements and rising incidence of chronic diseases. However, unpredictable side effects of liquid nutritional supplements is the major factor hindering the market growth.

Growing Consumption of Liquid Nutritional Supplements to Drive Global Liquid Nutritional Supplement Market Growth

Developments in the life sciences and food industries have resulted in a vital transformation that has allowed introduction of liquid nutrition supplements. Incorporation of various essential nutrients, such as vitamins, minerals, and proteins, in a single nutritional supplement drink leads to high preference for these drinks among people. Technological developments have also enabled manufacturers to introduce ready-to-drink nutritional liquids that rule out the efforts required in preparing the drink.

The popularity of liquid nutritional supplements is increasing among all the age groups, such as adults, children, and elderlies. While the consumption of these drinks is more common among the adults as they require more nutrition to balance their stressful lifestyles, easy consumption, handling, and storage are further boosting their popularity among the population of other age groups. The adult group of people includes working population, athletes, sports players, lactating mothers, pregnant women, fitness enthusiasts, and others. The ready-to-drink liquids can be stored for a longer period of time and consumed whenever required, thereby saving time of consumers. The demand for medical supplements in the liquid forms, such as of juices and milkshakes, are growing among the all age groups of people.

The COVID-19 crisis has overburdened public health systems in many countries and highlighted the strong need for sustainable investment in health systems. As the COVID-19 pandemic progresses, the healthcare industry is expected to see a drop in growth. The life sciences segment thrives due to increased demand for invitro diagnostic products and rising research and development activities worldwide.
