Chronic cough is defined as a persistent cough that lasts long up to 6-8 weeks. It significantly affects the life of the patients by interrupting sleep, creating vomiting sensation, light-headedness, and even rib fractures. It is caused due to multiple reasons such as infections, asthma, and gastro esophageal reflux disease (GERD). The chronic cough market growth is attributed to factors such as rising incidences of chronic cough and growing product developments to treat chronic cough are expected to drive the growth of the market. However, product recalls is the major factor hindering the market growth.

Rising Incidences of Chronic Cough

Chronic cough is caused due to asthma, acid reflux from the stomach, and postnasal drip. The conditions such as infection, bronchitis, and lung diseases are also likely to lead to chronic cough. The condition such as asthma is rising across the world; it is commonly seen among children and adults. It is a major cause of the growing health burden in the US. For instance, according to the Centers for Disease Control and Prevention (CDC) data published in 2019, one among every three people has asthma in the US. Across America, over 25 million people live with asthma, which accounts for ~8% in adults, and nearly 8.5% in children.

In developing regions such as the Asia Pacific and the Middle East and Africa, the prevalence of chronic diseases is rising due to pollution and infections. The countries in these regions are highly populated. Although, cough is a non-communicable disease, it is increasing significantly in the countries. Several governments are putting their efforts to control the incidences of chronic cough in the respective countries. According to the National Health Policy 2017, India, premature mortality due to non-communicable diseases, including chronic cough, will be reduced by ~ 25% by 2025.

In the Middle East and Africa, respiratory diseases are rising due to climatic conditions. The countries surrounded by deserts are prone to the risk of respiratory diseases due to the easy spread of allergens. Over 60 to 70% of patients in the countries are diagnosed with respiratory diseases. Another major cause of chronic cough among people in the region is smoking. Nearly 30% of the people are addicted to smoking, which further leads to rising incidences of chronic cough.

COVID-19 first began in Wuhan (China) during December 2019 and since then it has spread at a fast pace across the globe. The US, India, Brazil, Russia, France, the UK, Turkey, Italy, and Spain are some of the worst affected countries in terms of confirmed cases and reported deaths. The COVID-19 has been affecting economies and industries in various countries due to lockdowns, travel bans, and business shutdowns.
