Cerebral palsy is a combination of different disorders that effect a person's ability to maintain posture caused majorly due to abnormalities in the brain. Apart from movement

and posture, a person suffering from cerebral palsy may witness problem with hearing, speech,

changes in spine such as scoliosis or joint problems including contractures. Four major types of cerebral palsy are prevalent across the globe. Spastic cerebral palsy effects muscle stiffness resulting in awkward movements. The stiffness occurs in the legs with arms less. This leads to difficulty in walking due to tight leg muscles. Vice versa in dyskinetic cerebral palsy, people have problems with controlling hand and arm movements, making it difficult to walk and do stuff.
