Prevalence of cancer has witnessed two-fold growth around the globe in recent years, owing to poor lifestyle,

increased stress burdens, smoking & alcohol, and use of contraceptives in few cases. It is the second leading cause of global deaths, including lung cancer as the most potent one. Major symptoms of premature cancer include skin lump, changes in bowel, fatigue, and persistent cough. This enlightens the underlying need of design and development of new age effective therapies for cancer treatment. Under treatment procedure, primary treatment, adjuvant treatment, and palliative treatment form different arrays. Among primary treatment scenarios, surgeries and chemotherapies are the most effective techniques. Goal under surgery procedure is to completely remove cancer from the body.
