FOSSILS OF SEA LIFE FROM THE JURASSIC PERIOD

Bioclastic remains of fossils belonging to sea creatures that lived 195 million years ago during the "Jurassic" dinosaurs' period were found on the dolomitic limestone that formed the plate, which was registered with the university report. It was also noted that the remains, named after the Jura mountains in the European Alps, are concentrated in some parts of the plate.

COMPLETELY 'NATURAL' FORMATION

The report states that the figures on the plate with the inscription "Bismillah" in Arabic were completely "natural" formations. It was stated that the writings were formed as a result of the fragmentation, deformation and arrangement of the remains of heart-shaped shellfish over time.

In the scientific report given by the Dean of Akdeniz University Faculty of Theology Prof. Dr. Ahmet Ögke, it was stated that the Arabic figures on the marble are the same character as the 'Bismillah' verse, which is mentioned in the Qur'an and it means "In the name of Allah".
