EINPresswire.com/ -- According to IMARC Group's latest report, titled "In-Memory Computing Market: Industry Trends, Share, Size, Growth, Opportunity and Forecast 2021-2026," the [global in-memory computing market](#) exhibited strong growth during 2015-2020. Looking forward, the market is expected to grow at a CAGR of around 25% during 2021-2026.

In Memory Computing Market

We are regularly tracking the direct effect of COVID-19 on the market, along with the indirect influence of associated industries. These observations will be integrated into the report.

In-memory computing (IMC) refers to the process of storing information or data in the main random-access memory (RAM) instead of complicated relational databases operating on slower disk drives. It helps users analyze a vast amount of data quickly and reduces the overall latency of storage, thereby enabling faster decision-making and lowering costs.

## Market Trends:

The primary factor driving the global IMC market is the numerous advantages offered by IMC. It helps reduce the load on the organization's information technology (IT) infrastructure and overall operational costs while freeing up resources, enhancing efficiencies and boosting business insights. Consequently, it is used by banking, financial services and insurance (BFSI) organizations for fraud detection, risk management and financial analysis. Besides this, the exponential growth of big data has increased the demand for IMC due to its ability to archive, recover, deliver and access historical data. Furthermore, the development of [peer-to-peer](#)

transactions, digital currency, and mobile wallets have further facilitated the market.
