Demand Shift from Mechanical Tenderization to Meat Tenderizer Powder:

The mechanical tenderization of meat is widespread in countries like the U.S., however, the consumers are becoming aware of the fact that such meat products contaminate faster. When meat is tenderized through blades and needles, the chances of organism penetration to the meat core increases. The e-coli outbreak in 2012 has led a large number of meat product recalls. These facts have been leading to a shift of such consumers towards meat tenderizer powder. More than 90% of the beef producers are using the tenderizing process, and with the growing demand for meat tenderizer powder based processing, its market can swell significantly.
