A vertical fan coil unit (FCU) consists of a fan that draws the air inside a unit and then blows it on a heating or cooling coil. Then, the air comes out of the fan coil unit, which is either hotter or cooler than before. Each fan coil unit is supplied with the outside air to ensure sufficient ventilation. The average shelf-life of a vertical fan coil unit is between 10 and 15 years. Vertical fan coils must be properly stacked, should be located one above another from floor to floor, and should be interconnected with one another by the same piping loop. The vertical fan coil market has been segmented on the basis of type and application.
