

# With 900+ Successful Neurosurgeries Neurociti Hospital & Diagnostics Centre Became No. 1 Leading Neuro Centre In Punjab

*With +900 Successful Neurosurgeries Neurociti Hospital Became One Of The Leading Neuro Centre In Punjab*

LUDHIANA, PUNJAB, INDIA, December 28, 2021 /EINPresswire.com/ --

Neurological disorders demand attention and care

Neurociti Hospital and Diagnostics Centre: There's one thing that many of the health issues can be prevented or the severity of those conditions can be addressed. Indeed! India is advancing in the medical sector by bringing the most inventive and effective technologies. However, there is one sector and that is neurological disorders whose estimated cases are getting higher & higher with time.

Neurological disorders are categorized as 'NON-communicable diseases' but that doesn't mean they can be avoided. The increasing cases of neurological disorders like:

Stroke

Headache disorders

Epilepsy

Cerebral palsy

Alzheimer's disease

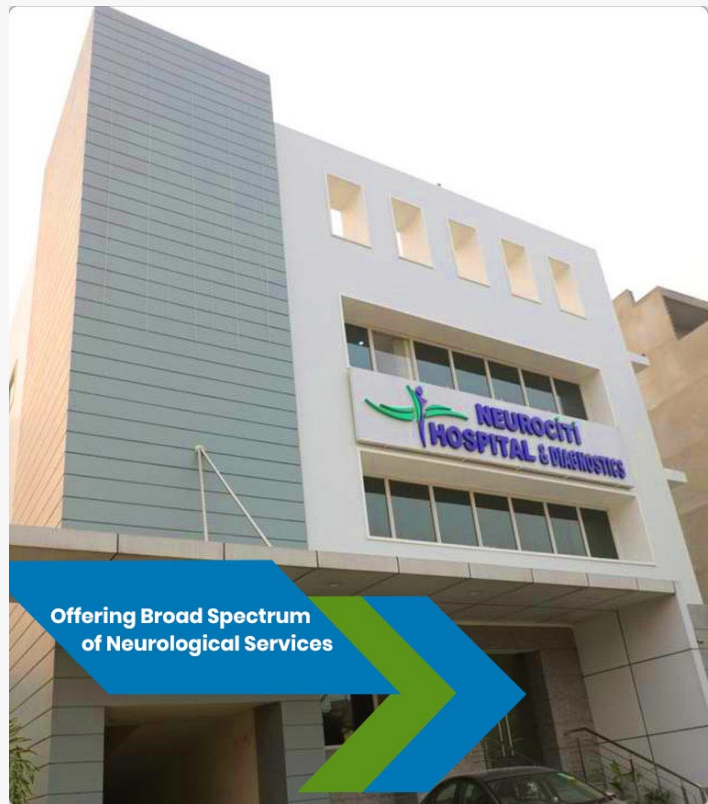

Brain and central nervous system

cancer

Parkinson's disease

Neurociti Hospital and Diagnostics Centre Logo

Neurociti Hospital and Diagnostics Centre Ludhiana

Multiple sclerosis  
Motor neuron diseases  
Traumatic brain injury  
Spinal cord injury

So, what's the catch here? Considering the entire scenario the demand for an experienced [neurologist in Ludhiana](#) is on the rise.

Surprising statistics!

India accounts for 30 million people suffering from neurological health issues. At such a high prevalence rate, automatically the demand for experienced neurologists is needed.

Advanced and Updated Neurosurgical option

Like every other individual, 'NEUROSURGERY' term can create havoc on what might happen or what if something goes the wrong way. Be it the brain or spine, their proper functioning is essential to take the overall health in the right direction. The requirement here is to find an experienced neurologist who is aware of the desired problem the patient is suffering from.

As time passes by, medical science is bringing all those things which no one would have thought of. In recent times, the way of conducting the treatment has become precise and most importantly the patient's quality of life gets better. The key reason for greater inclement towards the advanced neurosurgical options are:

Ability to get the early diagnosis  
Effective treatment & more precise one  
Minimal downtime

Detailed Diagnosis Better Makes a Customized Solution

Diagnosis can seem like a jigsaw puzzle: HOW? Neurological conditions are way too many and to point out the exact reason for the prevailing symptoms takes time. Indeed! It's like having all the pieces right in front of us but it takes effort to reach the final stage of 'What's wrong?' Seek medical assistance from the skilful [Neurosurgeon in Punjab](#) is the stage where possible causes will come to light.

It's not just about one factor but a whole lot of things are needed to diagnose what is wrong. The diagnosis can have the following situations:

Doctors evaluate the medical history & check what all symptoms are there  
Physical examination to better point out the exact condition  
Investigation or tests

Most importantly the patient has to mention every minute detail. Missing out on something or thinking it's not relevant might trigger a problem. Even if the patient experiences loss of smell, it should be informed to the doctor.

Priority towards a better quality of life

It's like taking a pledge that, 'No matter what is needed or done, there will not be any delay

especially when it's about health'. With time the brain and spine surgeons are looking to hit the mark of success and most importantly doing all those things which improve the patient living standards. In the case of the tumour patients the focus is given on:

How many tumours are removed?

Extent of resection

Median survival rates

Choosing that specific centre is essential which is backed up with all the latest and innovative surgical equipment and treatment which helps the surgical outcomes to reach that stage that is needed.

Consistent and careful approach is needed

The advent of minimally invasive neurosurgery is making the patients have that trust (Still many of them are not aware of its effectiveness). No matter what sort of neurological health issue is there, the problem has to be discussed on time and regularly. This is the reason, the focus is put on improving the patient quality of life and altogether monitoring a medical management plan which suggests nothing but the best.

Neurociti Hospital and Diagnostics Centre is one of the leading [Neuro Hospital](#), making every bit count by bringing out the most intriguing and advanced treatment options. Neuro health should not be considered confusing or not easy to treat!
