

# Global Raised Access Flooring Market: Presenting Opportunities for Sustainable and Aesthetic Construction

*The Global Raised Access Flooring market is projected to grow at a CAGR of 6.1% over the next six years*

LONDON, UNITED KINGDOM,  
December 30, 2021 /

EINPresswire.com/ -- The Global Raised Access Flooring market is likely to ascend at a CAGR of 6.1% over the forecast period (2021-2027) according to QuantAlign Research. Increasing urbanization over the decades has led to an upturn in the construction of high-rise buildings across the globe. The lack of space in densely urbanized regions is the key factor driving the growth of raised access flooring market. The rising populations in the cities has also meant that the high-rise construction is no longer restricted to the financial and business sectors. High-rise residential developments have become an accepted global model for managing the increasing number of city dwellers. A majority of high-rise residential tower blocks in major cities are now being developed as luxury accommodation, with a mixed-use element incorporating leisure facilities, concierge services, restaurants and retail.

Raised Access Flooring

The raised terrace has several advantages over the traditional terrace claddings. In the pedestal support system technology, the top surface of terrace (tiles or decking joists) lays freely on the adjustable pedestals, which allows the whole terrace to be in level, even if the base structure has any slope. As the whole terrace is not fixed to the basis, external weather conditions do not lead

to layer defects. The tiles gap in the raised ventilated terrace allows water to drain fast and easily.
