Ceramic tile is one of the most preferred flooring options in the architecture and construction business across the world. These are manufactured from feldspar, bentonite, kaolin, sand, and glass as basic ingredients. Ceramic tiles offer reduction in household allergens, and are environment friendly, easy to clean, very low maintenance, economical, and are scratch resistant, moisture resistant, and dust free.

The global ceramic tiles market is fuelled by the expansion of the building industry. Furthermore, growth in the usage of ceramic tiles as an alternate for other goods in residential applications, including as marble, paints, and glass, is projected to boost ceramic tile demand in the near

future. Stringent restrictions governing the emissions of exhaust gases during the production of these tiles, on the other hand, are likely to limit market development. As a result, the adoption of environment-friendly manufacturing methods is projected to provide profitable possibilities for market participants.
