

Artificial Intelligence in BFSI Market is projected to grow at a CAGR of 36.5% till 2028, Claims Emergen Research

Increasing usage of Artificial Intelligence in BFSI for fraud prevention is driving growth of the market

VANCOUVER, BC, CANADA, January 5, 2022 /EINPresswire.com/ -- [Artificial Intelligence in BFSI Market Size](https://www.emergenresearch.com/request-sample/585) is expected to reach USD 68.23 Billion at a steady CAGR of 36.5% in 2028, according to latest analysis by Emergen Research.

The report offers insightful data and information gathered from a wide range of primary and secondary sources. Furthermore, the report, which has been scrutinized using various essential tools, provides a clear image of the growth potential of the market over the forecast timeframe and helps investors identify market scope and opportunities accurately.

The latest report analysis is also inclusive of the details pertaining to each of the market segments in the global Artificial Intelligence in BFSI market.

AI understands customer behavior and allows banks to customize financial products and services by adding personalized features to build strong relationships with customers. Digital payment advisors, Artificial Intelligence bots, and biometric fraud detection mechanisms result in high quality of services to a wider customer base. AI helps in increasing revenue, reducing costs, and boosting potential of profit.

Robotic process automation is helping in automating repetitive, rule-based tasks, which streamline meticulous and tiresome tasks, and avoid errors. AI helps financial institutions to

optimize salary budget by eliminating the need to hire new employees for repetitive tasks, which in turn is fueling market growth.

The latest report sums up the changes constantly taking place in the global Artificial Intelligence in BFSI market with regard to the ongoing COVID-19 pandemic and pays special attention to the market dynamics and trends.

AI deployment is witnessing a surge in demand due to change in customer expectation during and after the COVID-19 pandemic. During the first few months of the pandemic, usage of online and mobile banking channels across various industries increased significantly and is expected to keep growing in future. Implementation of social distancing norms has reduced physical visits to banks, customers are increasingly using digital banking, and their expectations are changing due to premium services provided by some banks. Artificial Intelligence helps in understanding the need of users and suggests services tailor-made for them.

The global Artificial Intelligence in BFSI market report focuses on various national and international business development prospects, as well as competitive terrains of the worldwide market. The market size estimation and forecasts detailed in this report are based on a thorough research methodology and are tailored according to the different conditions that create the demand for the global market.

Some Key Highlights in the Report

In February 2021, FinMkt, which is a loan origination and point of sale financing SaaS provider, announced its partnership with Persistent, which is a global solutions company that delivers enterprise modernization, next-generation product engineering, and digital business acceleration. The partnership will allow small and mid-sized financial institutions to accelerate the digital lending strategies. FinMkt will ramp up its Artificial Intelligence and machine learning capabilities to provide financial institutions with significant insights to shape their credit policies.

Fraud detection & prevention units in BFSI companies are using Artificial Intelligence to eliminate such activities. Big data is characterized by volume & value and by capturing and processing this in real-time, and Natural Language Processing (NLP) algorithms can detect inconsistencies and discrepancies and ensure fraud prevention.

Machine learning provides banking companies the opportunity to enhance their business by improving performance and efficiency of BFSI activities. Machine learning attempts to study, identify and classify patterns and make decisions from data collected over time. Machine learning can be used to produce accurate and rapid results, which will drive demand among

BFSIs.

Artificial Intelligence is proving to be a major game changer in risk management. Financial institutions are prone to risk due to the type of sensitive information they handle on daily basis. AI streamlines management of those risks in a growing competitive industry and new algorithms are being developed to completely automate the risk management process.

North America accounted for the largest revenue share in 2020 due to technological advancement and high investment in AI. Commercial banks in the region are focusing on improving customer services and increasing revenue.
