The 50M to 90M patrol vessel class has been changed because of innovative design and technological developments. The newest models are more adaptable, have more flexible designs, and operate more efficiently. A patrol vessel with a length of 90 meters can accommodate roughly 60 people and transport up to 50 troops or passengers. These include improved flight decks for helicopter operations, as well as modern infrastructures, such as virtual technologies for integrating armaments, management systems, sensors, and other detailed systems for complicated warships. The North Atlantic Treaty Organization (NATO) and other coalition missions benefit from the fighting system. The 90-meter offshore vessel from BAE Systems is equipped with an air surveillance radar that can identify low-flying aircraft (which are used for smuggling operations).
