Key Highlights From The Report

The large proportion of surgical wounds in the wound type segment can be attributed to the increasing incidence of diabetic foot ulcers & pressure ulcers and post-operative surgical wounds. Surgical wounds extend the stay of the hospital, cause an enormous economic burden, and significantly impair the quality of life. The increasing number of surgeries due to trauma, accidents, and increasing chronic disease prevalence will boost the market over the forecast period.

Increasing hospital admissions due to chronic and increased incidence of hospital-acquired pressure ulcers are key market drivers for this end-user segment's growth. Furthermore, extended hospital stays of diabetes patients in this end-user segment further increases the demand for advanced wound care products.

The market for moist wound therapy is expected to grow at a CAGR of 9.5% during the forecast period. Factors that drive this segment's growth include the increasing incidence of diabetes-associated ulcers and increased demand for innovative and advanced wound dressings to treat such wounds.
