Development of innovative urinary incontinence devices, surge in demand for minimally invasive procedures, and rise in risk of urological disorders drive the global urinary incontinence device market. However, lack of awareness regarding novel developments in the urinary incontinence devices, underreported cases of urinary incontinence, and post-operative complications associated with the devices hinder the market growth. On the other hand, increase in healthcare expenditures in the developing countries present new opportunities in the coming years.

"Development of innovative urinary incontinence devices and rise in demand for minimally invasive procedures, increase in aging population coupled with high risk of urological disorders, and rise in shift from conventional solutions to novel urinary incontinent products are some factors which drive the growth of the market. Furthermore, growth in healthcare expenditures in the developing economies create a lucrative opportunity for market growth"
