

# Geotechnical Services Market Latest Advancements and Business Opportunities 2021-2030

*Geotechnical Services Market By Type And Application: Global Opportunity Analysis And Industry Forecast by 2030*

PORTLAND, OREGON, UNITED STATES, January 17, 2022 /EINPresswire.com/ -- Global [geotechnical services market](#) is projected to reach \$3.7 billion by 2030, growing at a CAGR of 6.7% from 2021 to 2030. Geotechnical service helps determine if a site is suitable for a particular construction project. Geotechnics is a civil engineering discipline that deals with the theory of the mechanics of soils and rocks to study the physical properties of terrestrial materials. Geotechnical services include drilling a deep hole in the ground, collecting soil samples, testing the sample, analyzing the test report, and making suitable foundation recommendations.

These services play an important role in the planning of large infrastructures, such as high-rise buildings, bridges, railways, tunnels, and similar construction projects on land and at sea. In addition to construction, geotechnical services are used in the oil & gas and mining industries.

Massive amount of investments made by government authorities for construction activities in emerging economies is one the factors responsible for driving the growth of the geotechnical services market. Moreover, developments in oil & gas projects is anticipated to benefit the geotechnical instrumentation & monitoring market in the coming years.

The geotechnical services market analysis has been done on the basis of type, application, and region. On the basis of type, the market is fragmented into underground city space, slope & excavation, and ground & foundation. The underground city space segment is expected to hold the largest geotechnical services market share during the forecast period due to the use of underground city space, which is one of the prerequisites for the development of megacities.

Depending on application, the market is categorized into bridge & tunnel, building construction, marine, mining, municipal, oil & gas, and others. The municipal segment was the major share contributor in 2020, whereas the oil & gas segment is projected [to register a CAGR](#) of 7.2% during the geotechnical services market forecast period.

Region wise, North America garnered the largest share, as the region houses major geotechnical services companies, especially in the U.S. Moreover, increase in number of new infrastructure projects is expected to escalate the demand for geotechnical instrumentation and monitoring tools. Therefore, rapid development of new infrastructures in the Americas is one of the [major driving factors](#) for the geotechnical services market growth in this region.

The major companies profiled in geotechnical services industry are AECOM, Stantec, Geoquip Marine Group, WSP, Fugro, HDR, EGS Survey, Gardline Limited, Arup, and Kiewit Corp. These players have adopted strategies such as product launch and business expansion to sustain the competition and to strengthen their foothold in the market.

Impact of COVID-19 on the Global Geotechnical Services market:

As COVID-19 is an infectious disease that originated in Hubei province of the Wuhan city in China in late December. The highly contagious disease, caused by a virus, severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), is transmitted from humans to humans. Since the outbreak in December 2019, the disease has spread to almost 213 countries around the globe with the World Health Organization declaring it a public health emergency on March 11, 2020. The outbreak of COVID-19 pandemic had led to partial or complete shutdown of production facilities, which do not come under essential goods, owing to prolonged lockdown in major countries such as the U.S., China, Japan, India, and Germany. It has led to either closure or suspension of their production activities in most of the industrial units across the world. Construction & infrastructure is one of the most affected sectors, owing to a lockdown announced in several countries.. Lockdown has affected several construction and infrastructure projects due to supply chain disruptions and the unavailability of workers. In March 2020, Boston became the first city in the U.S. to halt all construction activities to contain the spread of COVID-19, which negatively impacted the growth of the geotechnical services market.
