Sterilization technologies are procedures used to eliminate transmissible agents, such as bacteria, virus, fungi, and prions, by using chemical and physical agents known as sterilants. Increase in number of surgeries, rise in number of hospital-acquired infections (HAIs), and growth in demand for sterilization technologies in various end user industries, including food & beverage, are major factors that drive the market growth globally. Ethylene oxide, formaldehyde, hydrogen peroxide, and propylene oxide are active agents employed in sterilization technologies. Enhancement in low-temperature sterilization systems through continuous innovation has led to reduced processing time and capacity expansion for instrument reprocessing. Regulatory authorities present in this market include the Food and Drug Administration (FDA), International Organization for Standardization (ISO), and Occupational Safety and Health Administration (OSHA). High cost of sterilization equipment & devices and stringent regulations associated with harmful gases hinder the growth of sterilization technologies; however, technological advancements and rise in use of sterilization technologies in emerging economies provide numerous opportunities for market expansion.

Penetration of disposable products in medical and pharmaceutical industry is a threat to market growth, as it eliminates the need for sterilization technologies. However, all instruments and devices cannot be converted into one-time-use equipment, and thus sterilization technologies are expected to continue to flourish.

Comprehensive competitive analysis and profiles of major market players, such as

The key market players profiled in this report are Advanced Sterilization Products Services Inc. (U.S.), Atec Pharmatechnik GmbH (Germany), Belimed AG (U.S.), Getinge Group (Sweden), Nordion (Canada) Inc. (Canada), Noxilizer, Inc. (U.S.), Sterile Technologies Inc. (U.S.), Steris Plc (U.S.), The 3M Company (U.S.), and TSO3 Inc. (Canada).
